Subject: Sediment Background

See attached.

From the e-mail I sent to you and Bill earlier:

- Sediment background
 - Bakers bridge: 4 total background samples, 2 spring, 2 fall. Averages shown for both.
 - A72: 3 spring, 2 fall. Averages shown for both.

And the average downstream Animas value combines all but A72 including the average at Bakers Bridge from all sample events including spring.

Let me know if you have questions.
